VETYVER OIL: Export demand and production were well balanced during the month of September. The expected and usual autumn rains have begun and normally intensify during October/November. Typically, the production of oil decreases during the rainy season because the roots are wet and give lower yields. Inventories are modest. At this time, we do not foresee much change in export prices. We have stock and invite your inquiries.

AMYRIS OIL: Sales and production were steady/active. There are no excessive stocks. Qualities were good/ acceptable. Sales have been such that no extreme quantities of inventory accumulated. Prices remain unchanged to firm. We have stock and invite your inquiries.

Our oils are all natural, pure – as distilled – NOT assembled/manipulated/adjusted.

HONDURAS

CARDAMOM OIL: We are producing as we receive orders. There is no stock for immediate deliveries. For this oil, we solicit your inquiries.

STYRAX GUM AND OIL: The situation is unchanged. Demand for both the Purified Gum and the Oil 645P were slow. Prices can hardly go any lower – otherwise, collection of the raw material would be hampered. Your inquiries for both the Purified Gum and the Oil are invited.

We look forward to hearing from you.
